

# Multisensory Research *at* Vanderbilt

# Autism Research

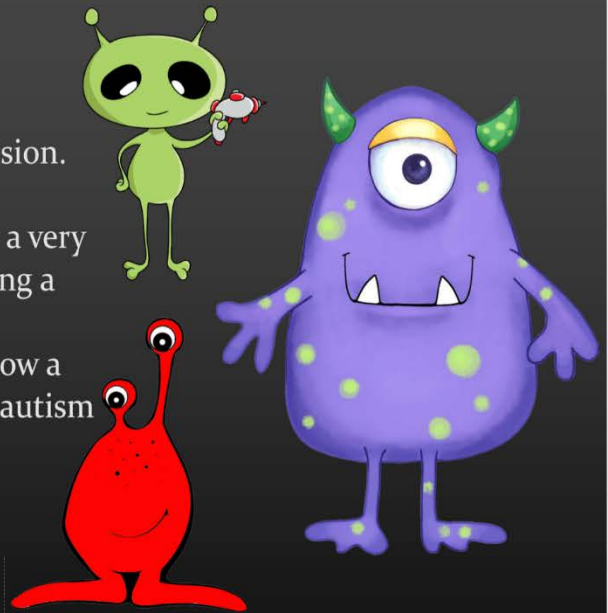

## Now Recruiting:

Children (ages 5-7) with autism spectrum disorders and typically developing children.  
Must have normal or corrected-to-normal hearing and vision.

We will assess your child's language and ask them to play a very simple alien-catching game on the computer while wearing a silly "alien-hunting hat."

We are hoping to work with children with autism who show a wide range of language abilities, including children with autism who do not yet talk.

You will be compensated for your time.

Date of IRB Approval: 10/25/2018
